MICROSOFT PARTNER ENABLEMENT · EMEA

# Frontier Consultancy

## AI-First Delivery for Partner Consulting Teams

A partner enablement programme that teaches AI-first delivery by running it on a real internal project of yours, before any customer is on the hook. **Three tracks. One motion.** Same agents, same toolstack, same playbook your team takes to paying engagements the week after.

**55%**
faster task completion with GitHub Copilot

**20–30%**
faster delivery on cloud + AI-assisted modernization

**30–40%**
lower delivery cost vs. traditional motion

**SOURCES** Peng et al., *The Impact of AI on Developer Productivity: Evidence from GitHub Copilot*, 2023 · McKinsey, *In search of cloud value: Can generative AI transform cloud ROI?*, 2023.

THREE TRACKS · PILOT PHASE

- **CAIP** · Azure
- **AIBS** · D365 & Power Platform
- **Security** · in scoping

THE PARTNER CHALLENGE

### Delivery is changing faster than practices.

- Expert consultant time consumed by low-value tasks AI can handle today.
- Skill shortage across Azure, D365, and Security delivery practices.
- Customer expectations on cost, speed, and AI-readiness rising quarter on quarter.
- AI-first delivery is becoming the new baseline. Partners who build the muscle now keep margin when it does.
- Training alone does not change practice. Doing the work does.

THE ENGAGEMENT

### An AI-first motion you learn by doing.

Frontier Consultancy equips a partner team to deliver AI-first work end to end. The mechanism is **customer-zero**: your team builds the playbook and the toolstack by running a real internal project before any paying customer is on the hook.

**Build AND operate.** The same agent fleet that builds the platform stays attached to run it. Project revenue on the build, recurring revenue on the operating layer. One toolstack does both.

- Hands-on workshop using your own laptops, tools, and repos.
- Real agents, MCP servers, and Copilot patterns built during the engagement.
- Customer-zero project run by your team, coached by Microsoft.
- Reusable artifacts you keep and redeploy on the next paying engagement.

THE FRONTIER MOTION · FROM WORKSHOP TO AI-FIRST PRACTICE

| PHASE 1 | PHASE 2 | PHASE 3 | PHASE 4 | PHASE 5 |
|---|---|---|---|---|
| **Workshop** | **Customer-zero** | **Co-delivery** | **GTM & reuse** | **Scale** |
| Hands-on day with the deck, exercises, and live agents. | Your team runs a real internal project with our coaching. | First customer engagement with Microsoft alongside. | Joint case study, demo asset, marketplace listing if it fits. | Partner trains own consultants. Showcase day. Community. |

WHAT YOU WALK AWAY WITH

### Artifacts, not slides.

- **A working customer-zero project.** Real internal use case shipped before the programme ends.
- **A reusable agent or asset.** Built during customer-zero, deployed to the next engagement.
- **A curated toolstack.** Skills, agents, and MCP servers for Copilot CLI and VS Code.
- **An AI-first delivery playbook.** The framework the workshop teaches, in writing.
- **Hands-on exercise material.** Clones to your machine. Yours to keep and rerun.
- **A team that has done it once.** The hardest part to fake.

AI TOOLS & TECHNOLOGIES

### Hands-on across the Microsoft AI stack.

Participants work with the tools they will use on customer engagements. Per-track focus, common foundations.

Copilot CLI · VS Code Agent Mode · GitHub Copilot · Copilot Studio · M365 Copilot · Azure AI Foundry · Dataverse MCP · ADO MCP · Custom MCP servers · Power Platform · Dynamics 365 · Sentinel & Defender

WHO SHOULD ATTEND

### The team that ships, not just the team that plans.

- Delivery managers and practice leads building an AI-first capability.
- Senior consultants and architects who will adopt the motion on customer engagements.
- Pre-sales engineers preparing demos and proposals.
- Technical leads across Azure, D365 & Power Platform, or Security practices.

BUSINESS OUTCOMES FOR YOUR PRACTICE

### Margin, IP, and a stronger Microsoft motion.

- Increase pre-sales and delivery capacity without adding headcount.
- Decrease implementation lead-time and cost for customers.
- Productize assets from customer-zero and resell across engagements.
- Layer a **build-and-operate** revenue stream on top of project work. Agents that built the platform stay on to run it.
- Drive consumption of Copilot, Azure AI, and the Microsoft AI stack.
- Open AI-first revenue streams beyond traditional services hours.
